

TECH RETREAT 2023

Untwisting the Rope of Character Identification

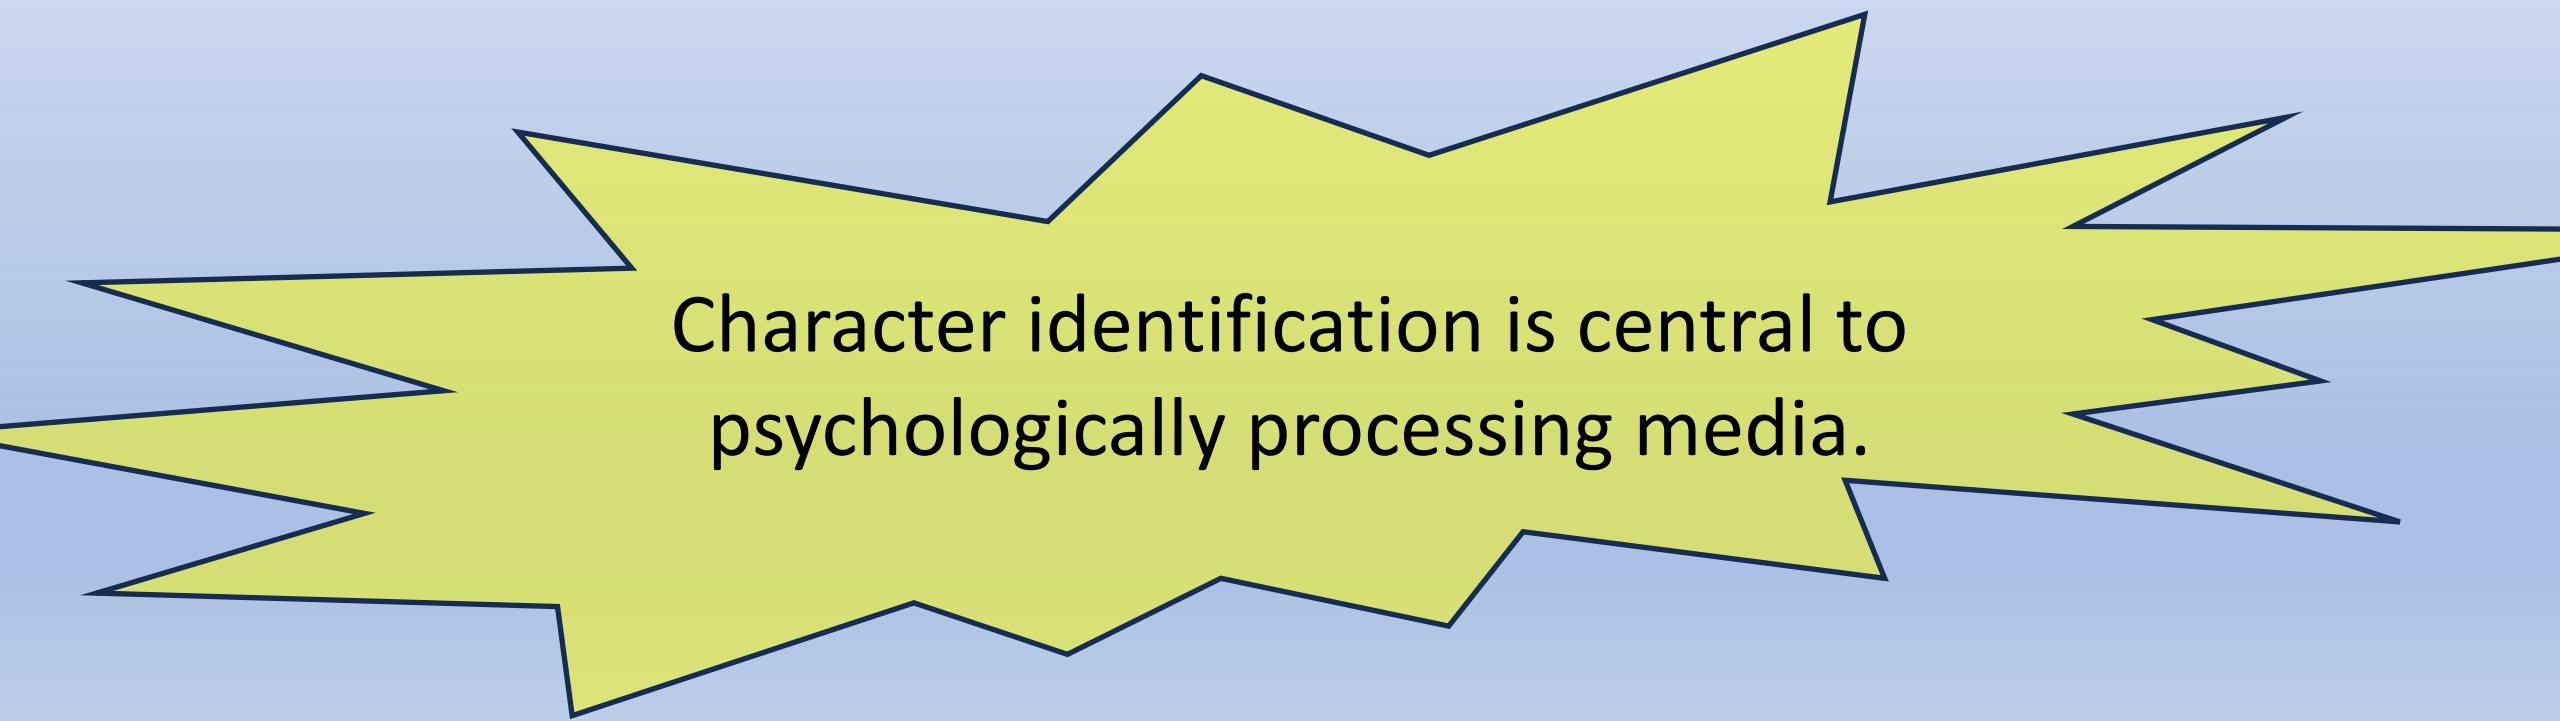

Holly Beavon, Ph.D. Candidate, Media Psychology
Fielding Graduate University

Why: Media Psychology

What: Observed Media Effects

What do your audiences need and want?

What data is currently available to you?

Character identification is central to
psychologically processing media.

Differences:

Terms Used?

Type of Media?

Display Type?

Interaction Level?

Who Interaction With?

Who Interacting As?

Predictors & Outcomes

Vs. States of Being

Origin of the Term “Identification” in Psychoanalysis

The Interpretation of Dreams (Freud, 1900)

Myths and Fantasy
Imagination
Unconscious Influences

Freudian Primary Identification:
Modeling and Merging with Parents

Melanie Klein Object Relations Theory (1882-1960)

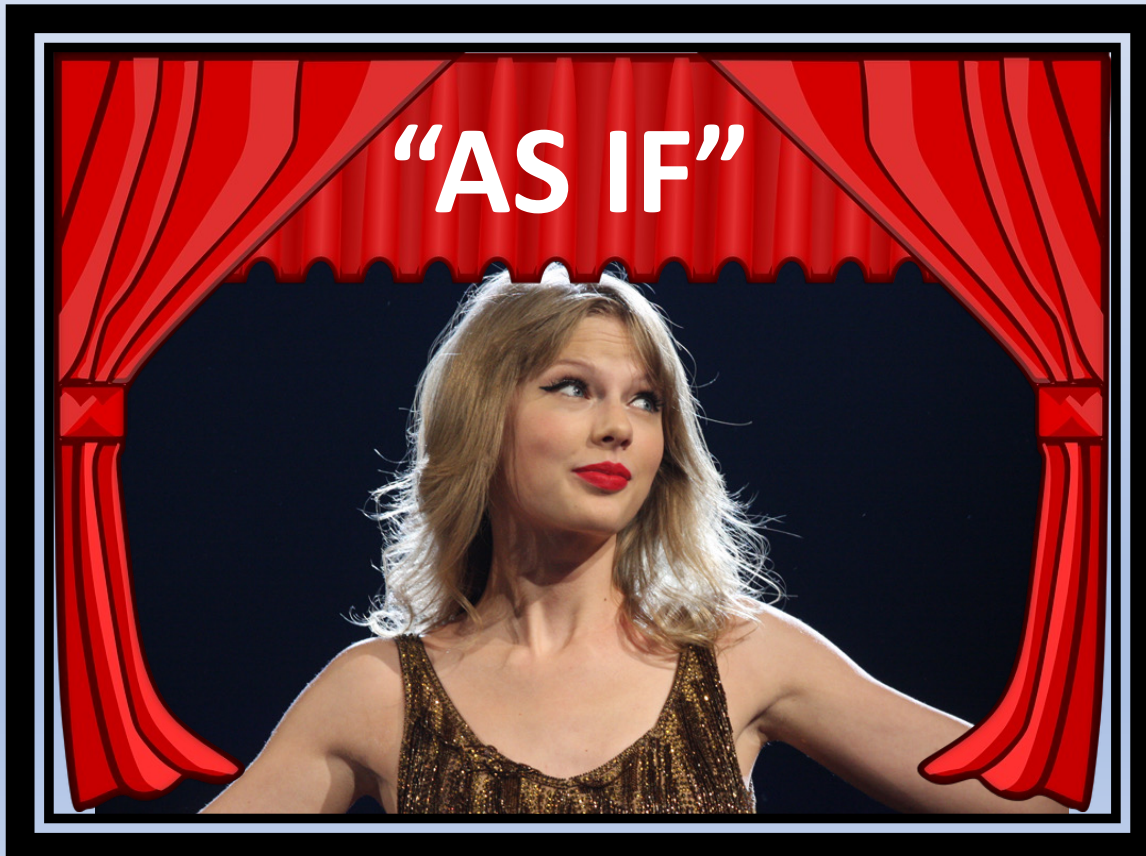

Projective Identification was a narcissistic defense mechanism of projecting oneself into another and thinking, feeling, and behaving through one's merged perspective with another person. (Segal, 1979)

Role Models & Mimicking Fans

Introjective Identification pulling aspects of others into yourself

Integration of these qualities in oneself

Like Characters,
Fully identified feels
Merged while "You are Me"

Carl Rogers Person-Centered psychotherapy
“Empathic Identification”:
Feeling through another’s perspective

Storytelling

Character Identification

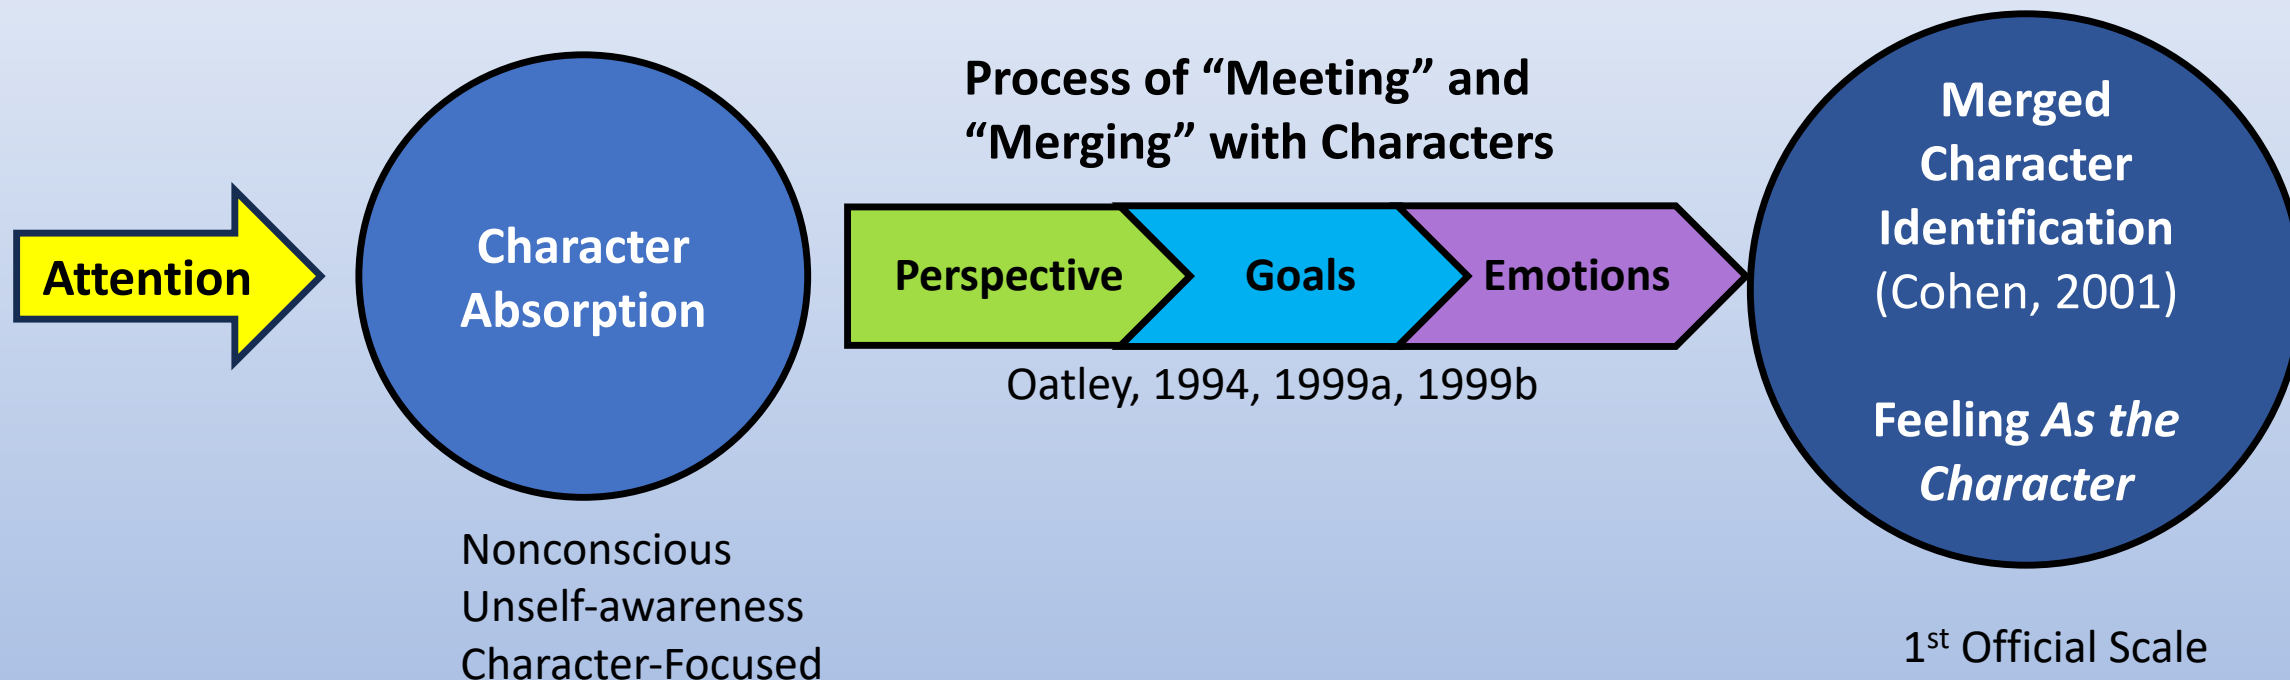

Engineering and User Interfaces

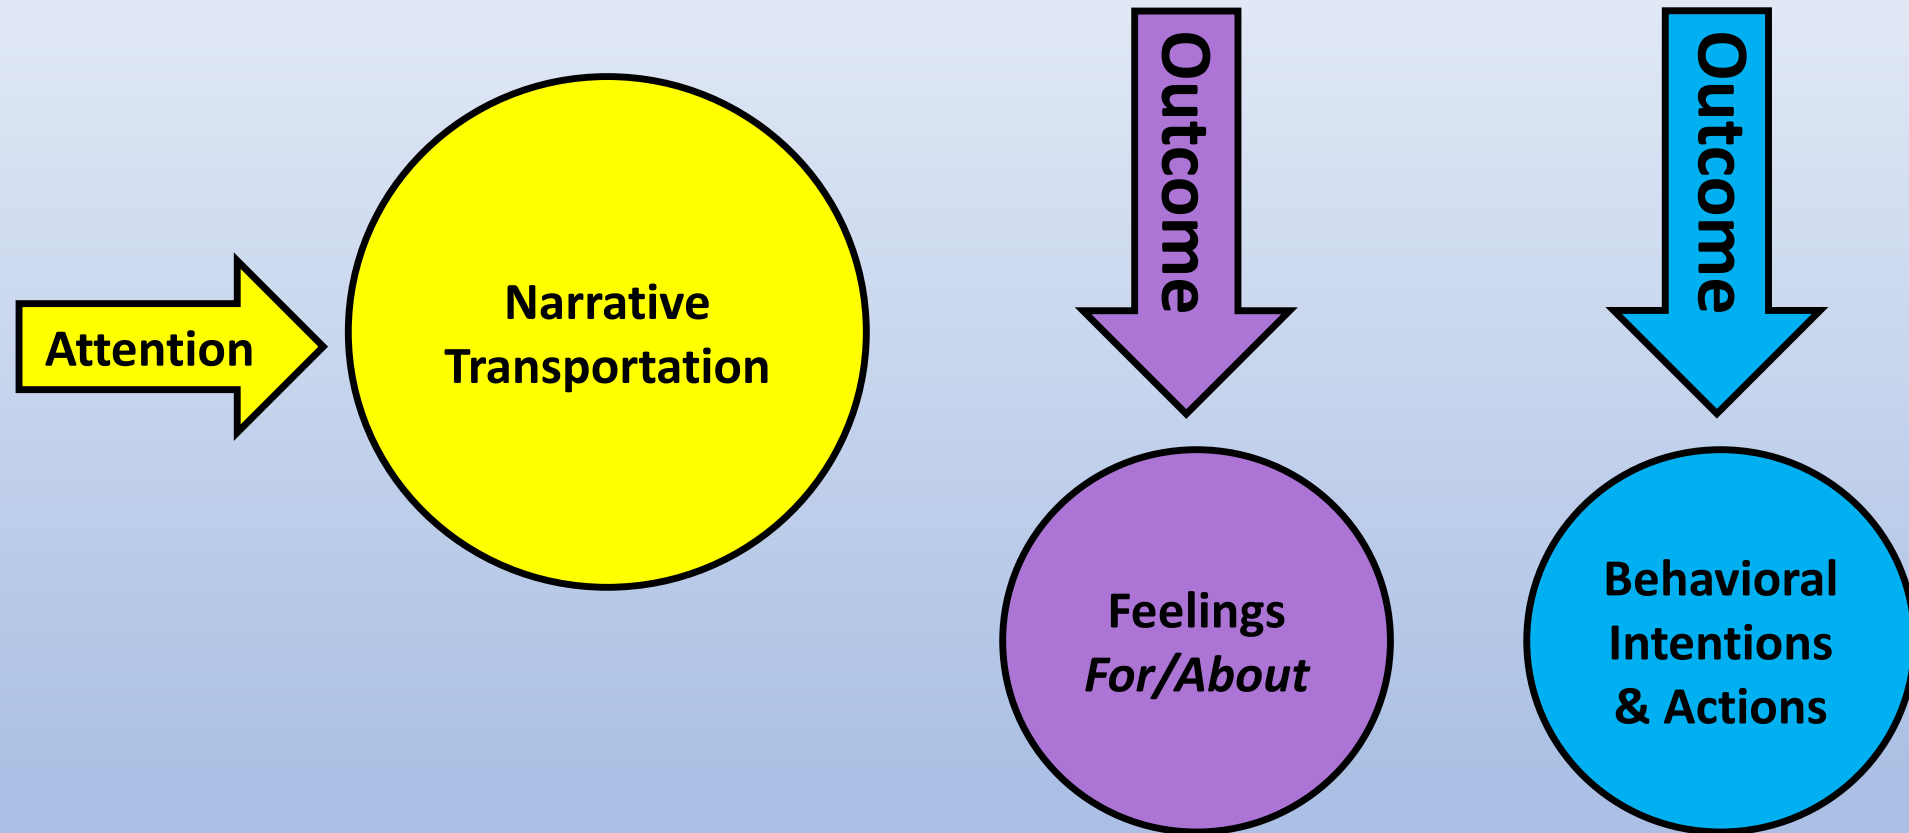

Personas &
Human Centered Design

Character Identification

State of Cognitive Simulation

Loss of Self-Awareness

Self-Other Awareness

Role Modeling Behaviors

Piaget, 1951 ; Bandura 1986

**CHANGED BELIEFS,
ATTITUDES, &
BEHAVIORS**

**Merged
Character
Identification
(Cohen, 2001)**

***Feeling As the
Character***

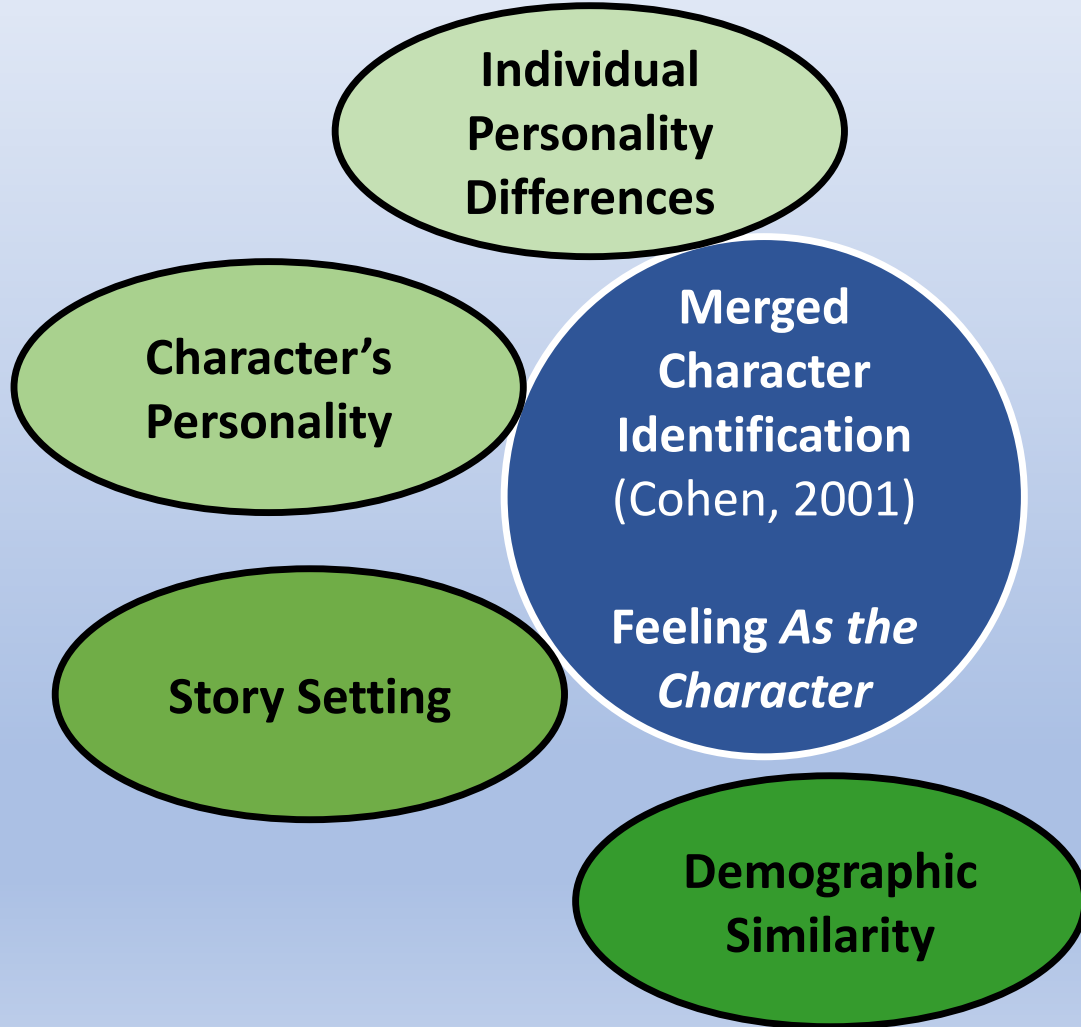

≠ Imitation

Loss of Self-Awareness

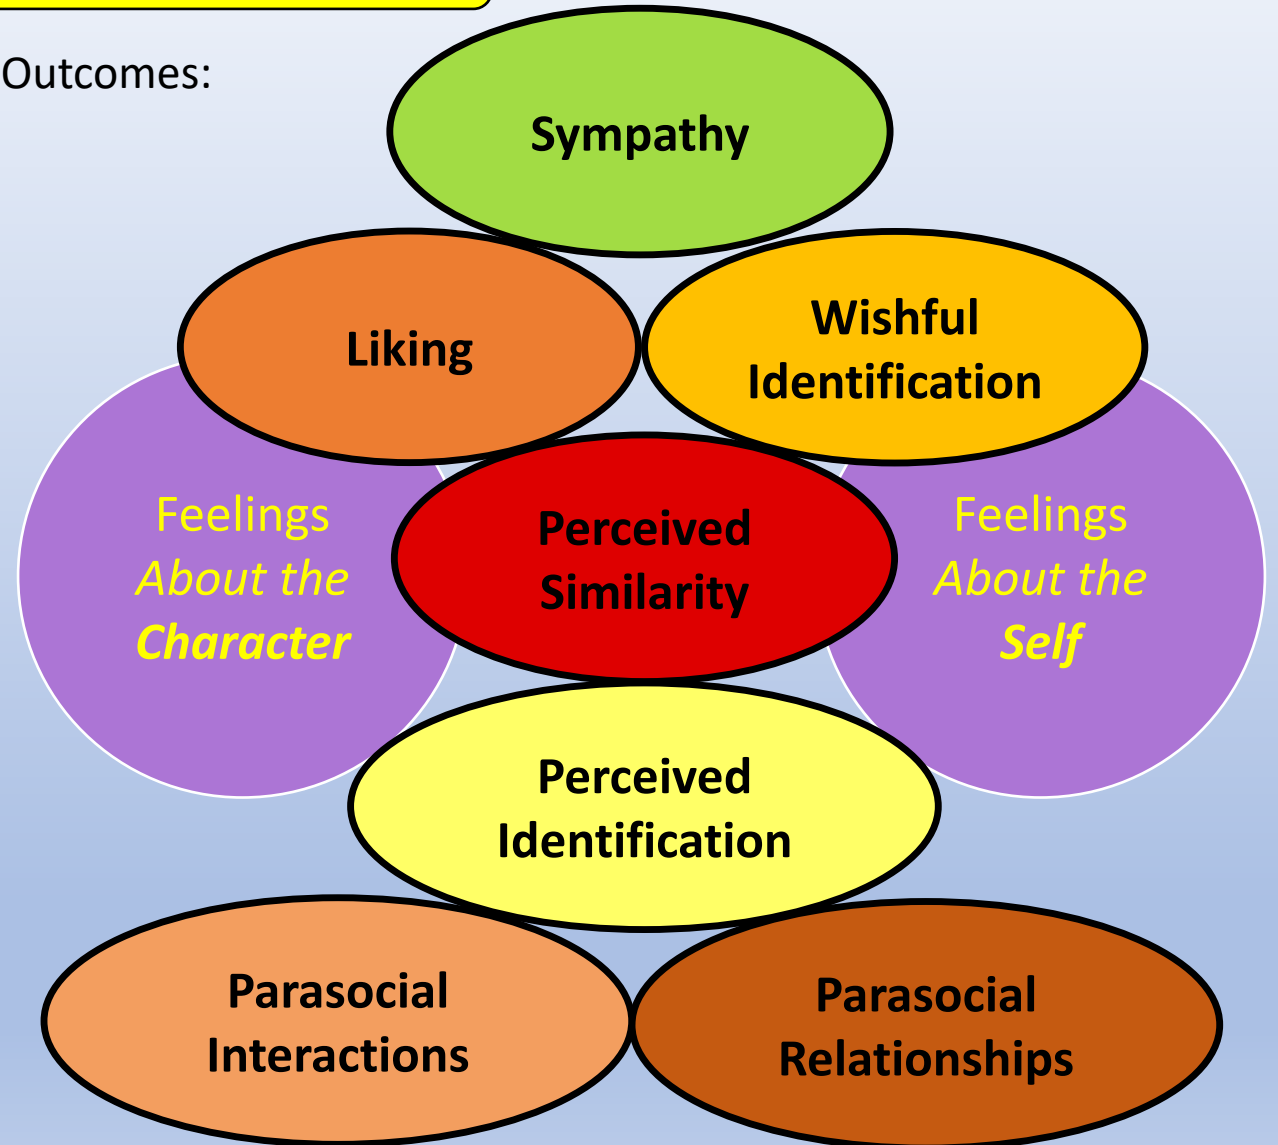

Narrative Psychological Models

Self-Other Awareness

Predictors:

Outcomes:

Role Modeling Behaviors

Personal Identity

Group
Identification
(ID)

Brand
ID

Political
ID

Moral
Judgment

Merged
Character
Identification
(Cohen, 2001)

*Feeling As the
Character*

Fan ID

Sympathy

Liking

Wishful
ID

Perceived
Similarity

Feelings
*About the
Character*

Feelings
*About
the Self*

145 Peer-Reviewed Empirical Studies

Research Question:

Within the empirical literature measuring character identification, how many studies also used Cohen's (2001) full concept of character identification?

Crosstabulation Data Analyses of Full Character Identification

Studies were **16.23 times more likely** to use the full operational with the full conceptual definition of character identification.

Internally Consistent/Matching:

Concept

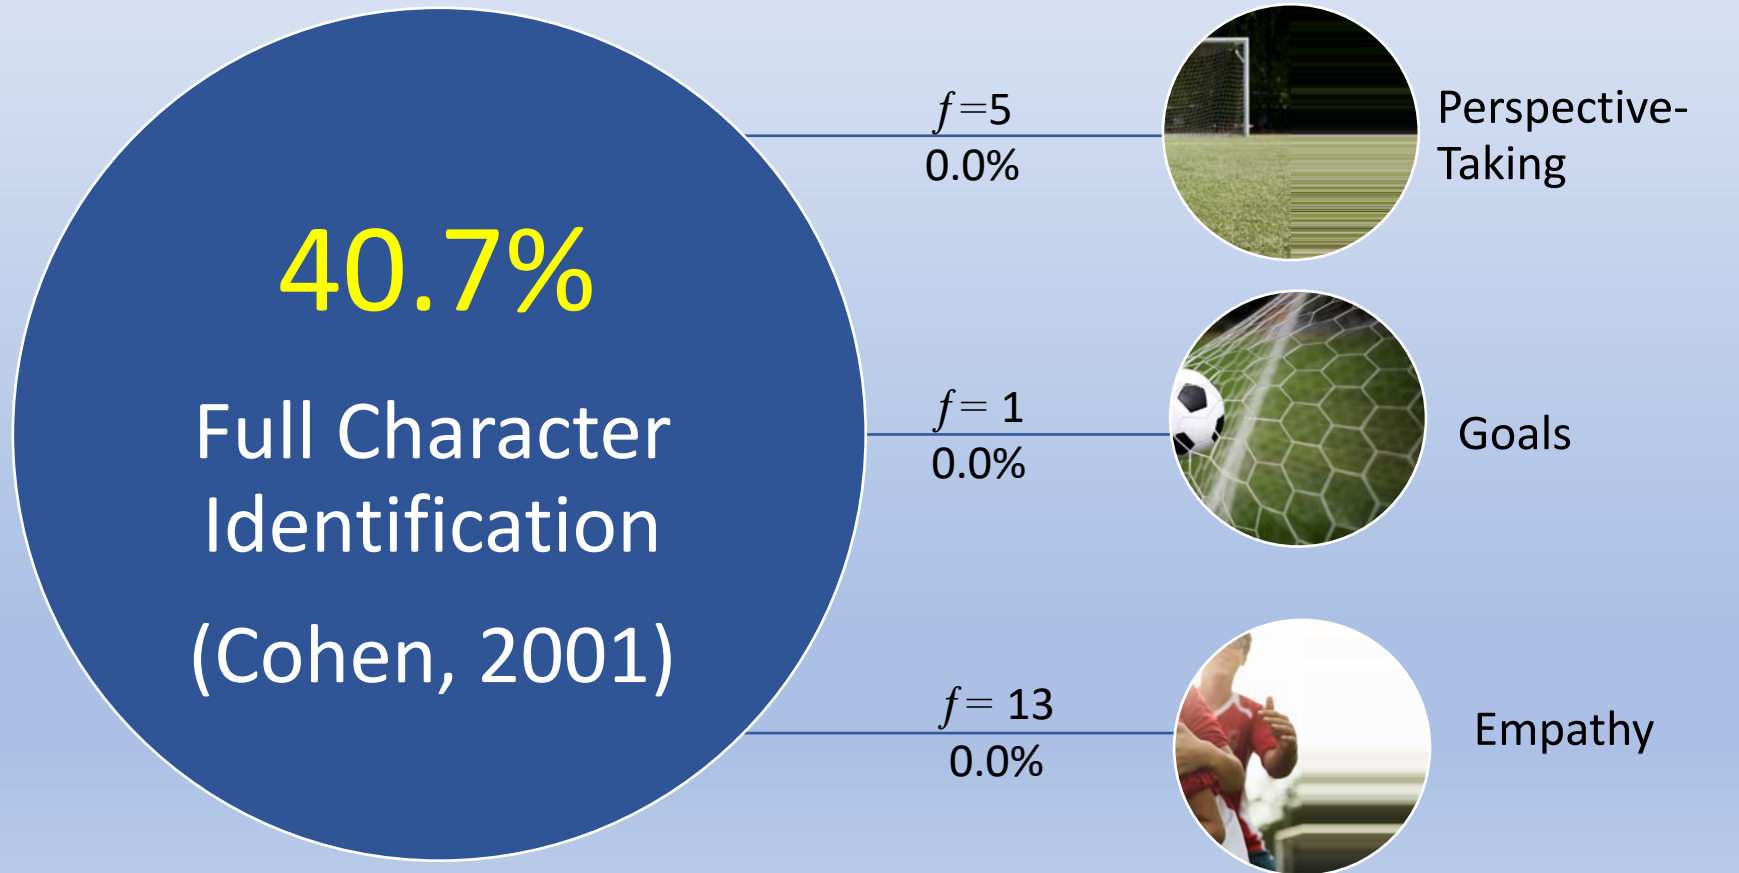

Measure

$$\chi^2(1, N = 145) = 45.43, p < .001, \phi = .56$$

Consistency of Concepts and Measures for Character Identification

86 studies used one or both, and 59 (40.7%) used both conceptual and operational definitions for full character identification.

Note: Sample of 145. Full ID is character identification defined a merged perspective, goals, and emotions. When both definitions had frequencies <5, they were omitted because they are not statistically significant using crosstabulations.

Measures of Character Identification in the Sample

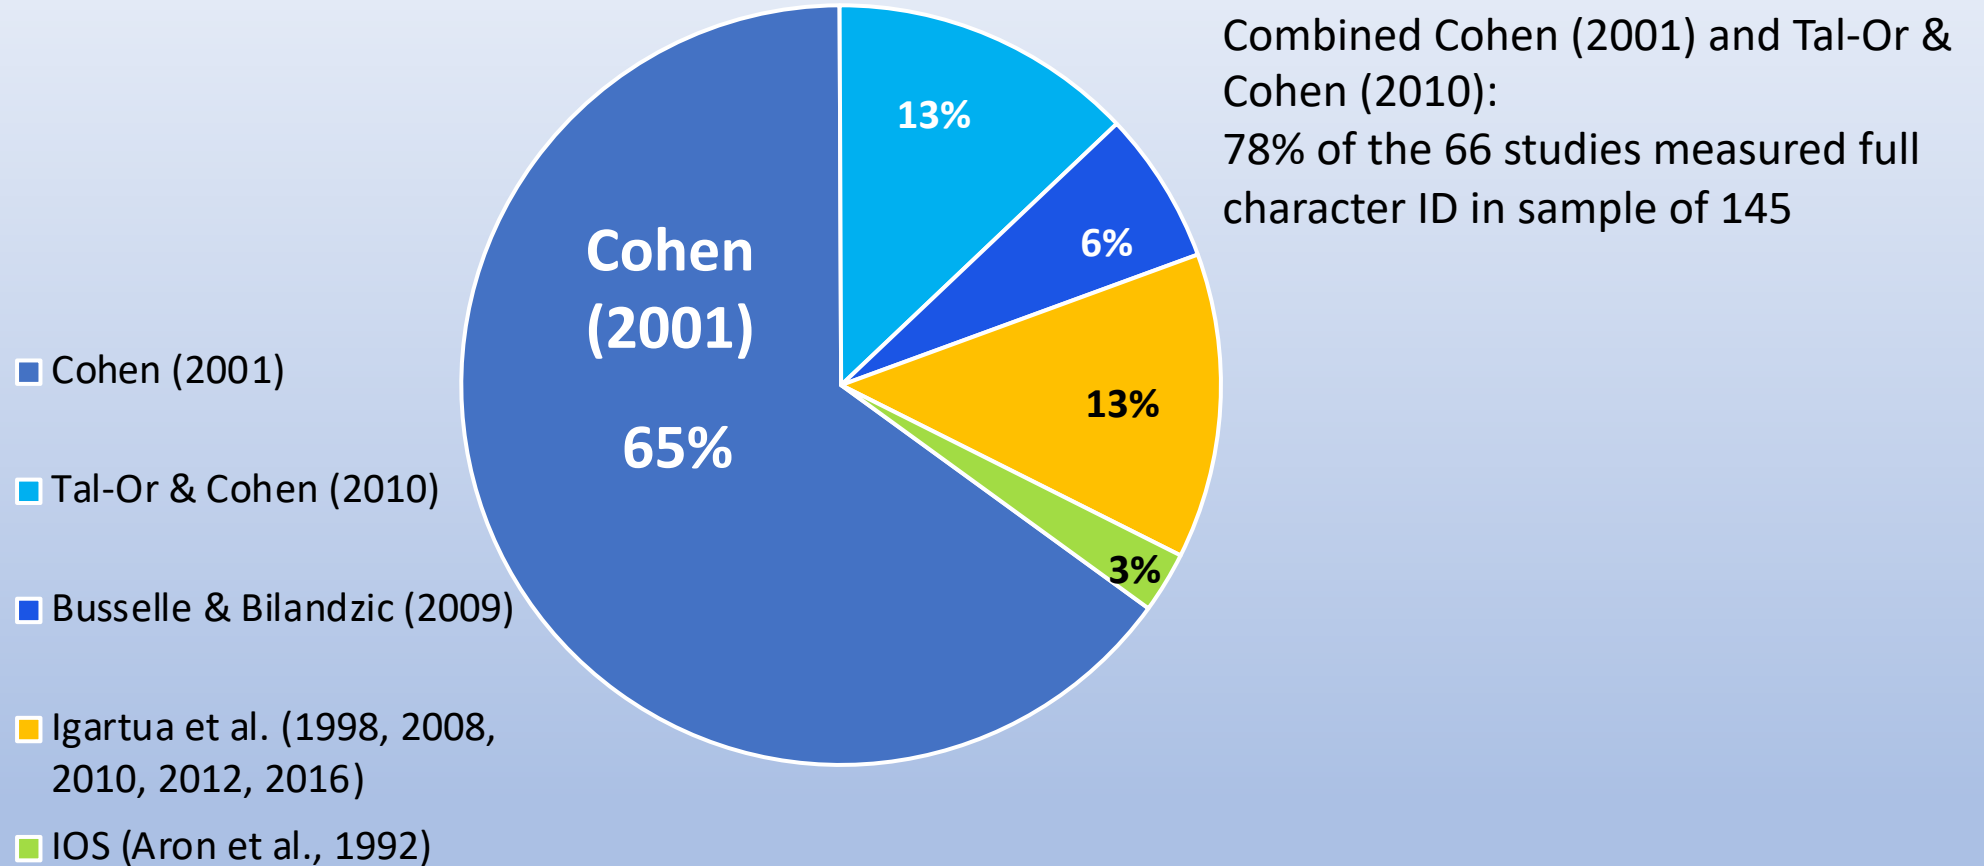

Note: N=145. Only frequencies >5 were included due to statistical significance.

Internal Consistency (Matching) of All Definitions for Character Identification

Note: Results from the first 2.5 years were multiplied by four to estimate the decade following 2020. $N = 145$

Scales Measuring Full Character Identification in the Sample

Note: Eyal and Rubin (2003) studies are grouped with Cohen (2001), and de Graaf (2012, 2014) are grouped with Busselle and Bilandzic (2009) because of the items' origins.

Inclusion of Other in the Self Scale (IOS; Aron et al., 1992)

2 Studies Used the IOS out of the 66 Measuring Full Character Identification (Full ID)

The IOS Measure:

Character-Consistent Attitudes & Behaviors

Conscious Willingness to Pay, Support Policies, etc.

Demonstrate changed attitudes, behaviors, and character-aligned goals.

Implicit Association Tests: Baseline Predictors

Reaction Times Reveal Subconscious Biases

Same-Valence Emotions: Type

Facial Expression Analysis

Computer Automated or Manually Coded by Trained Observers

Webcam or Live Camera

Photo [215437617](#) | Brain © [Martinmark](#) | [Dreamstime.com](#)

Cognitive Perspective-Taking: Aligned Visual Cues

True Eye Tracking

Are they looking where the character's looking?

Same-Valence Emotions: Intensity by Excitement/Relaxation

Heart Rate Variability

Wearable Consumer Devices – Electrocardiogram (ECG)

Motivation: Approach/Avoidance

Cognition: Focus/Distraction

Electroencephalogram (EEG)

Wearable Headgear

Same-Valence Emotions: Type & Intensity

Biochemical

Oxytocin – Saliva test for positive, empathetic emotions

Carbon dioxide exhaled by the audience measures the rate of respiration. (Poppy Crum at Dolby Labs)

Character Identification is the cognitive shift into the character's perspective, goals, and emotions that moves audiences into a new state of being and can integrate new attitudes and behaviors in the process.

Character Involvement includes other pathways to long-term engagement and changes to the audience's self-identity.

The logo for HDA, featuring the letters 'H', 'D', and 'A' in a stylized, bold, white font. The 'H' and 'D' are connected, and the 'A' is separate. The background is a dark blue gradient with a pattern of glowing red and orange dots arranged in vertical lines, creating a digital or data-like aesthetic.
