# The Growing Need for Accessibility

**466M+**

People worldwide with hearing loss

**1 in 10**

By 2050 will have hearing disabilities

**10M+**

Deaf & hard-of-hearing  
In the U.S.

**47%**

Of people aged 61-80  
experience hearing loss

**16%**

Of people 65-74 have  
significant vision impairment

# Impact & Usage

**98%**

of students find captions helpful

**91%**

of users rely on audio descriptions (69.7% blind, 21.1% visually impaired, 8.2% sighted)

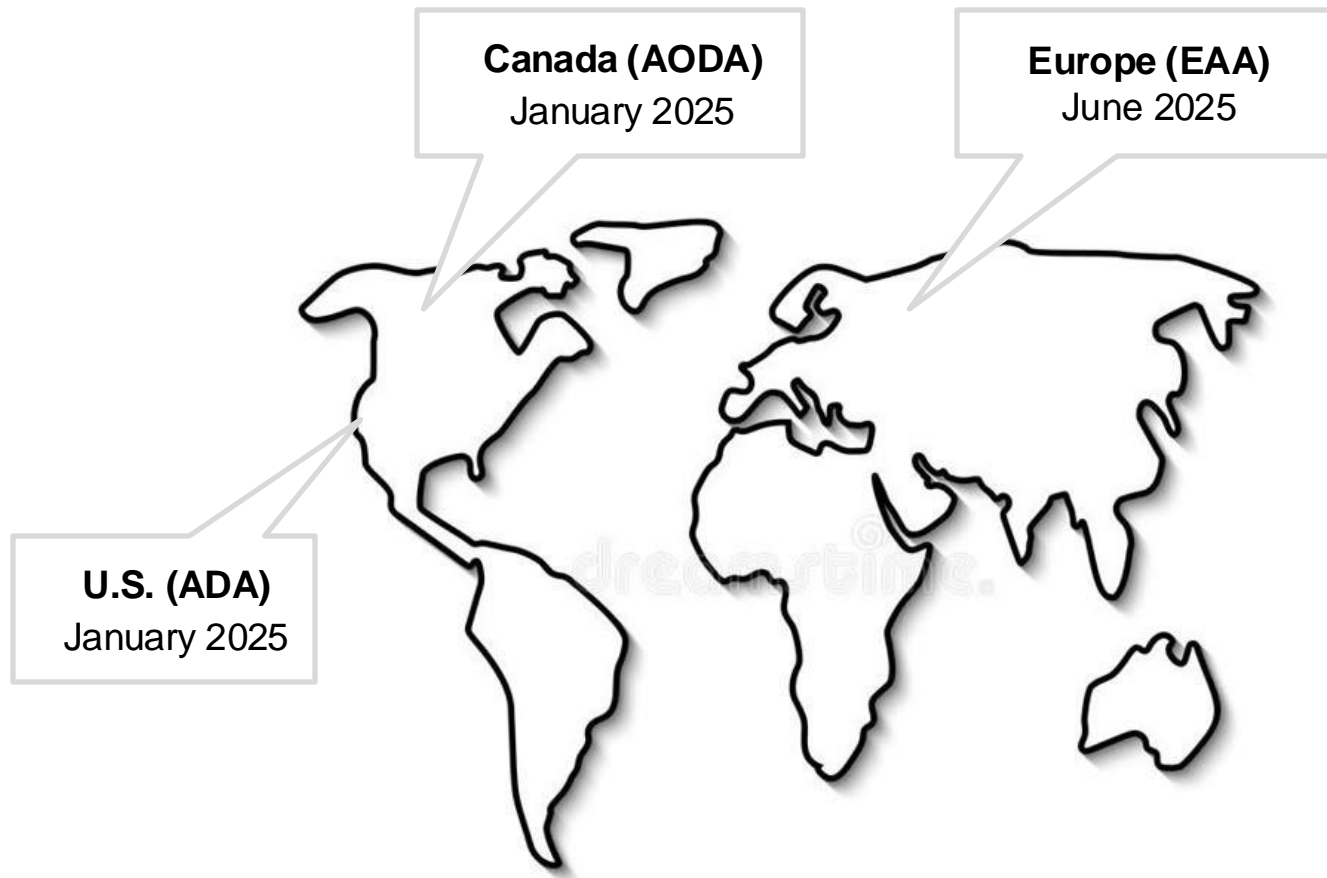

**75%**

strongly agree that more audio-described content is needed

**71%**

of people with disabilities leave a website if it's not accessible

# Deadlines for Implementation

## Are you ready to meet the European Accessibility Act 2025?

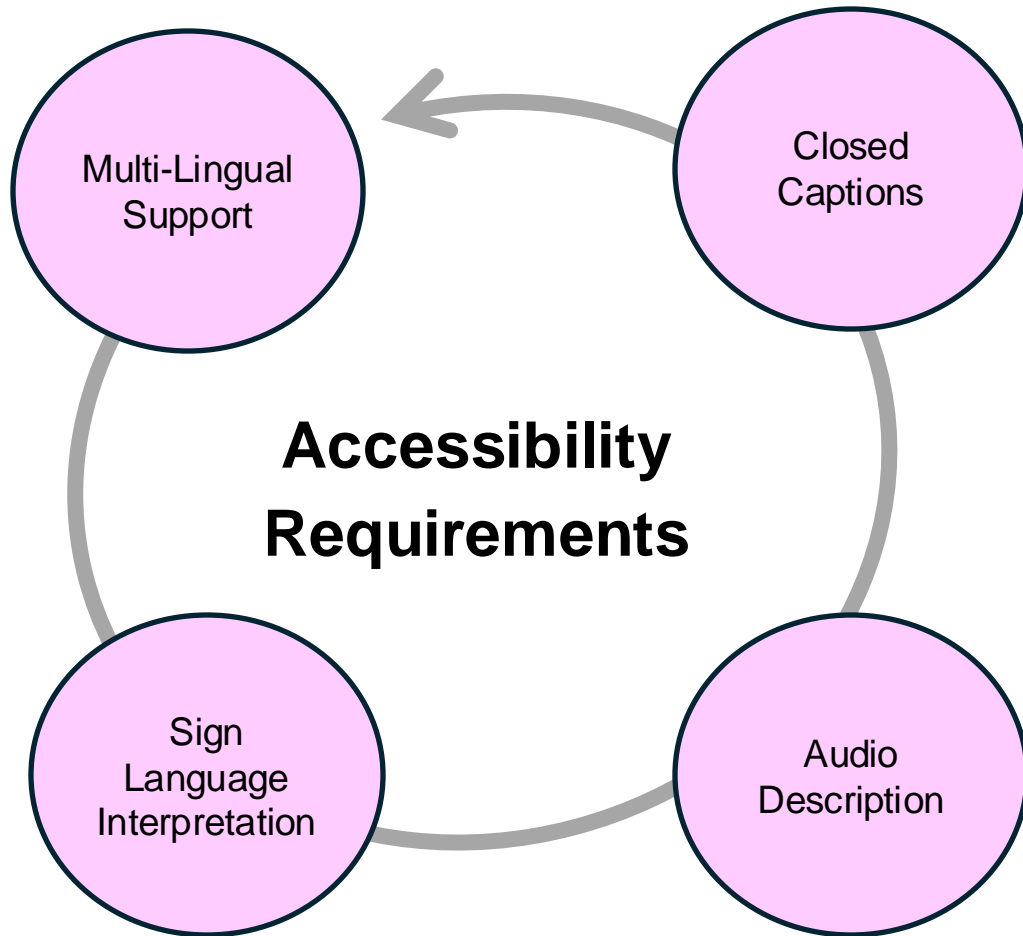

Making digital content accessible for all

**Viktor Popov**

January 23, 2025 • 3 min read

## Who's Impacted?

- Streaming platforms, broadcasters, media distributors, production companies

## What's at Stake?

- Legal risks
- Audience loss
- Financial penalties

**Can AI Help?**

- **Technical Complexity**

Accuracy in closed captions & audio descriptions

- **Costs & Compliance**

Implementation across platforms

- **Evolving Regulations**

Adaption to international standards

- **Workflow Integration**

Ensuring fit into production workflows

- **Scalability**

Large content libraries enablement

- Automated AD script generation

Script, Summarization, Multi-language

- Enhanced synchronization & timing

Scene recognition, Emotional matching

- Voice synthesis for AD narration

Human-like, customizable

- AI-powered QC & compliance

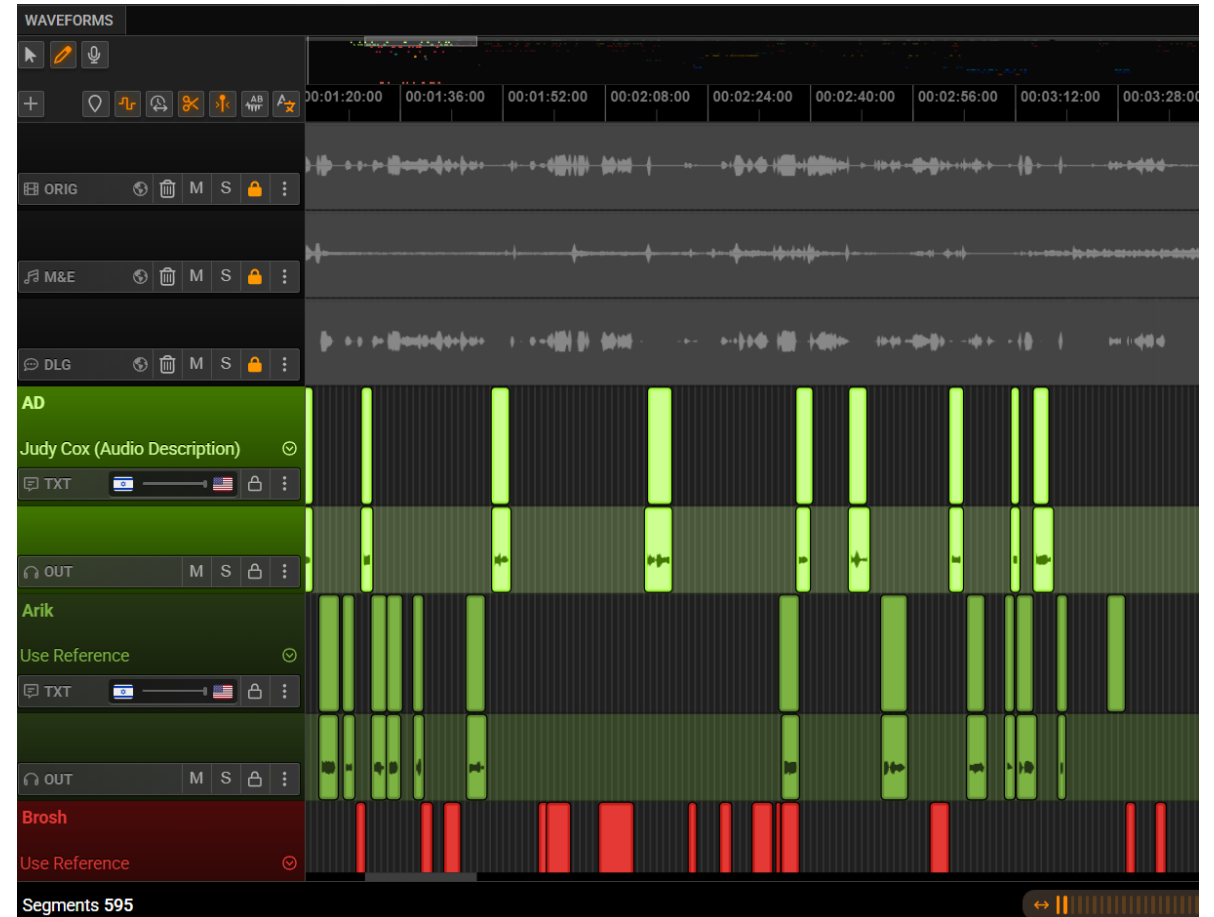

Overlap, STT accuracy, Voice clarity

- Scalability & cost reduction

Large libraries, Reporting

# Innovations in AI-Driven Accessibility

- **Emotive Text-to-Speech Technology:**  
Enhanced accessibility through expressive, natural-sounding AI voices.
- **Real-Time AI Processing & Multilingual Capabilities:**  
Live content translation for global inclusivity.
- **AI-driven quality control:**  
Ensuring regulatory compliance.

# Audio Description Demo

# AI Creation of Audio Descriptions

# American Sign Language Avatars with Generative AI

A futuristic digital environment with a central AI robot, glowing icons, and a crowd of people. The scene is set in a dark space with a large, glowing blue 'AI' at the top. A central robot with a glowing blue 'AI' on its chest stands in front of a large circular interface. To the left, there are glowing icons for a city, a heart, and a Wi-Fi symbol. To the right, there is a bar chart and a circular radar-like graphic. In the background, a crowd of people is visible, some interacting with digital screens and others looking at the central robot. The overall atmosphere is high-tech and futuristic.

# AI

## The Future of AI in Media Accessibility

## Where We Are Now

- AI is reshaping accessibility across, captions, AD, dubbing

## What's Next

- Smarter AI models improving accuracy
- Personalized accessibility experiences
- Live broadcasting & adaptive content

## Industry Outlook

- AI will become a regulatory standard for compliance
- AI-human collaboration will refine quality & inclusivity
- Ethical AI development is key to fairness & representation
